STATISTICA

SEDAS SINGLE USER INSTALLATION INSTRUCTIONS

Notes:
Users running Windows NT, 2000, or XP on their machines must login with Administrator permissions to complete the installation. The installation makes necessary changes to the system. If the user is prompted to reboot during the installation, he/she must login with Administrator permissions after rebooting to successfully complete the installation.

If you choose to install to SQL Server, Oracle, or any DBMS other than Access, you must create a database on which to place the SEDAS schema. The user permissions for installing to this database must be such that the user can create tables, views, and indices, and be able to select, insert, update, and delete records in the tables and views.

If you have a previous version of SEDAS (or SENS) already on your computer, please use Control Panel - Add/Remove Programs to uninstall the old program. This will ensure that data files created with earlier versions of SEDAS (or SENS) will remain intact. Once this is complete, please proceed with the following instructions for installation.

All workstations must have Microsoft Internet Explorer version 4.01 or higher installed.

Installation
1. Ensure that no other applications are running.
2. Insert the STATISTICA CD in the CD-ROM drive. The installation process should begin automatically. If the CD does not auto-start, browse the CD and double-click on Setup.exe.
3. The STATISTICA installation screen will appear. Click on Install STATISTICA.
4. The welcome screen will appear. Click the Next button.
5. In the CD Key / Net ID dialog, enter the CD key in the appropriate boxes. You will find the key on a sticker on the back of the CD case, below the serial number. Click Next to continue.
6. In the Date Code dialog, enter the Date Code. You will find the code on a sticker on the back of the CD case. Click Next to continue.
7. In the License Key dialog, enter the License Key in the appropriate boxes. You will find the key on a sticker on the back of the CD case. Click Next to continue.
8. Read the StatSoft software license agreement, and then click Yes if you agree with the terms and wish to continue the installation process.
9. To install to the default destination, click Next on the Choose Destination Location dialog. If you wish to install to a different destination, click Browse and select another destination, and then click Next. If the specified destination folder does not exist, Setup will create it automatically.
10. In the User Information dialog, enter the requested information in the appropriate boxes. The serial number is located on a sticker on the back of the CD case. Click Next to continue.
11. Select either Typical Setup or Custom Setup, then click Next. Typical Setup will install SEDAS with the most common options, and will automatically set up a database; this is recommended for most users. Custom Setup will allow you to choose the components you wish to install and the Program Folder; this is recommended for advanced users.
12. If you are satisfied with all of your choices, click Next on the Start Copying Files dialog.
13. Your system files will be updated and program files will be installed. If you receive any Version Conflict messages it is recommended that you keep your existing file (click Yes).
14. If the computer's system files need to be updated, you must restart your computer to continue the installation process. Click Finish on the Setup Complete dialog.
15. SEDAS requires Microsoft Data Access Components (MDAC) version 2.1. If the workstation does not have MDAC 2.1 (or higher) installed, its setup process will be started when the computer restarts. To complete this setup process, you must restart you computer once more.
16. Next the Database Setup Utility will appear. If you do not have an existing database, it is necessary to run this utility.
17. If you choose to run the Database Setup Utility, it will first prompt you to choose the type of installation: either create a new SEDAS database, or use an existing SEDAS database.
18. Select the Database Management System of your choice.

A. Access
Create New: If you choose to install to Access Database, in the Select Destination Folder Dialog, specify the path where this database will be installed. To install to the default location, click Next. To install to a different destination, click Browse, select another destination, and click Next.

Setup will then create the database, Sedas.mdb, in the specified location using the SEDAS schema. If a previous Sedas.mdb existed in the specified location, setup will create a backup of this database.

Use Existing: If you choose to install to Access Database, in the Select Destination Folder Dialog specify the path where this database is located. Click Browse to select the path to the existing database. The path will be initially set to the assumed default. Once the appropriate path is defined, click Next.

B. SQL Server
Create New: If you choose to install to SQL Server Database, in the Data Link Properties Dialog - Provider tab, select the Microsoft OLE DB Provider for SQL Server, and click Next.

In the Data Link Properties Dialog, on the Connection tab, enter or select the server name where the SQL Server Database is located, enter the information required to gain access to the server, and select the database on the server where the SEDAS schema will be applied. Click Test Connection to ensure that the connection information is correct. If the test connection is successful, click OK to apply the connection information. If the test is unsuccessful, verify that the connection information is correct and try again.

Use Existing: If you choose to install to SQL Server Database, in the Data Link Properties Dialog, on the Provider tab, select the Microsoft OLE DB Provider for SQL Server, and click Next.

In the Data Link Properties Dialog - Connection tab, enter or select the server name where the SQL Server Database is located, enter the information required to gain access to the server, and select the database on the server where the SEDAS schema will be applied. Click Test Connection to ensure that the connection information is correct. If the test connection is successful, click OK to apply the connection information. If the test is unsuccessful, verify that the connection information is correct and try again.

C. Oracle
Client version 8.01 or less
Create New: If you choose to install to Oracle Database, in the Data Link Properties Dialog, on the Provider tab, select the Microsoft OLE DB Provider Oracle, and click Next.

In the Data Link Properties Dialog, on the Connection tab, enter the name of the server where the Oracle Database is located and enter the information required to gain access to the database. Click Test Connection to ensure that the connection information is correct. If the test connection is successful, click OK to apply the connection information. If the test is unsuccessful, verify that the connection information is correct and try again.

Use Existing: If you choose to install to Oracle Database, in the Data Link Properties Dialog, on the Provider tab, select the Microsoft OLE DB Provider Oracle, and click Next.

In the Data Link Properties Dialog, on the Connection tab, enter the name of the server where the Oracle Database is located and enter the information required to gain access to the database. Click Test Connection to ensure that the connection information is correct. If the test connection is successful, click OK to apply the connection information. If the test is unsuccessful, verify that the connection information is correct and try again.

Client version 8.1 or greater
Create New: If you choose to install to Oracle Database, in the Data Link Properties Dialog, on the Provider tab, select the Oracle Provider for OLE DB, and click Next.

In the Data Link Properties Dialog, on the Connection tab, enter the name of the Oracle Database service and enter the information required to gain access to the database. Click Test Connection to ensure that the connection information is correct. If the test connection is successful, click OK to apply the connection information. If the test is unsuccessful, verify that the connection information is correct and try again.

Use Existing: If you choose to install to Oracle Database, in the Data Link Properties Dialog, on the Provider tab, select the Oracle Provider for OLE DB, and click Next.

In the Data Link Properties Dialog, on the Connection tab, enter the name of the Oracle Database service and enter the information required to gain access to the database. Click Test Connection to ensure that the connection information is correct. If the test connection is successful, click OK to apply the connection information. If the test is unsuccessful, verify that the connection information is correct and try again.

D. If you choose to install to another database, please contact StatSoft for Technical support.

19. Click Finish on the Setup Complete dialog.
20. After the installation process has been completed, you will see the STATISTICA program group window, which will contain the appropriate SEDAS application shortcuts.
21. To start using SEDAS, double-click the SEDAS shortcut, and type in the default login name "Admin," and password "abcdef." You will then be taken to the Component Manager window.

Uninstalling
To completely remove STATISTICA from each workstation, run the Add/Remove Program option found in the Windows Control Panel. To completely remove STATISTICA from the server, delete the folder containing the program files and all of its subfolders.

Repairing
To repair your existing installation of STATISTICA, run the Add/Remove Program option found in the Windows Control Panel. Then, choose Repair, and click Next. This will reinitialize all of your user information and Date Code information, and reinstall the files.
